

How and why did I implement PHP in my last project?

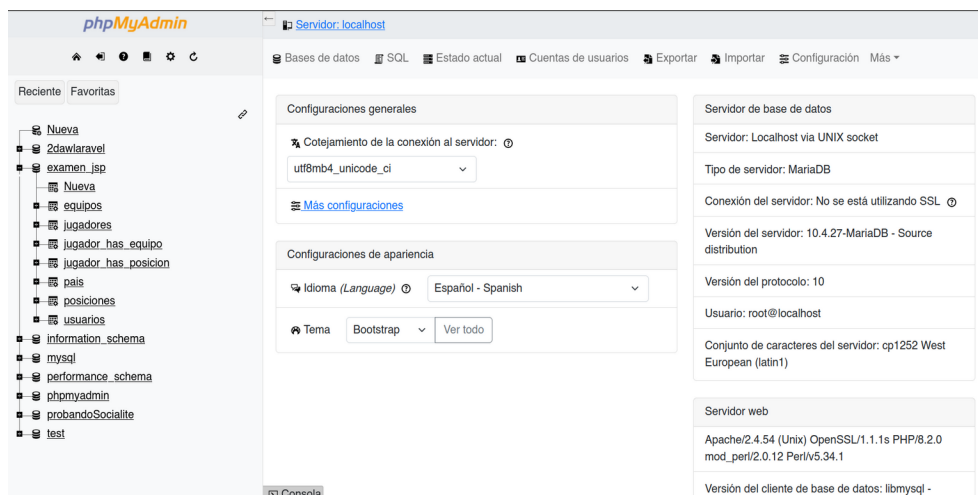

In my last shop online project the topic I chose was watch sales and I had to use PHP, MySQL and Twig, I also used HTML and CSS (Bootstrap). I did this project to test my skills at the end of the course, this article will describe the use of these technologies in detail.

'Home' page of timezone

The design and making of the database

We need to design the database to store information in it, like products, customers, orders, etc. Then we need to design and create the web pages for the shop online, using HTML, CSS and JavaScript.

Royal Oak Tourbillon Volante Automático

Ref. 26730BC.ZZ.1320BC.01

El bisel engastado con diamantes de talla baguette enriquece la estética monocromática de este Royal Oak Tourbillon Volante Automático de 41 mm de oro blanco de 18 quilates.

We need to write the necessary PHP code to connect to the database and perform operations such as adding products, processing payments, store information on customers who have registered.

MySQL was also used in conjunction with PHP to communicate with the database and perform CRUD operations. This allowed for the storage and retrieval of critical information like product and customer data.

We have two areas, the customer and the administrator. The customer side is where everyone can enter and watch our website, check the products, add them to a shopping cart some products and buy them. Next to, we have the administrator area, where only the administrator of the website can log in to verify or add the products, the customers profiles, create, read, update and delete information or data in our website.

In summary, the implementation of PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap in this project was essential for its success. These technologies allowed for the creation of a functional and dynamic online shop that met the needs of both customers and the website administrator.

This has been an excellent and basic project to do because I could really test all my skills learned in class during this trimester.
